A Non-Intrusive Method Using Induced Pressure Waves to Track Moving Objects Within Pipelines

Stephen Newman  MEng CEng IMechE
InnerVue™

Removing uncertainty

Non-Intrusive pressure wave analysis in pipelines and wells giving unique insight to manage the efficiency and integrity of your production assets.
Operators objectives and challenges

Pipelines transport a wide variety of fluids

Debris can build up over time

Maintenance required to maintain throughput

Tools can become lost or stuck
Current technologies

Theoretical modeling

Tracking with transmitter source (acoustic, electro-magnetic or isotope)

External ultrasonic measurement

Acoustic survey

Pressure wave analysis
InnerVue™ Non-Intrusive Pig Tracking
Object locating and tracking

Pinpoint Blockage Location

Track objects during recovery

Confirm tool moving

Early warning of potential problems during recovery
How it works

Pressure wave created at one end of pipeline

Reflected signature wave corresponding to features in the system:
- Barriers to flow – complete/partial
- Deposition of wax/other
- Leaks
Set up

One person mobilization with air freightable equipment

Access to system through instrumentation tie-in point
Object Tracking

Pressure wave generated by quickly bleeding a small volume from the line

Locate pig or object in pipeline

Wave reflects off blockage/restrictions
Typical pressure wave signal and response
Case Study – Commissioning Pig Stuck in Pipeline
Case study

Stuck commissioning tool

120km subsea pipeline

Non-intrusive pressure wave survey performed

Low risk

Rapid locating of stuck tool

Tracking of stuck tool during remediation
Equipment setup

Data recorder connected to system

Tie-in point on topsides

Pulse valve rapidly opened and closed to generate pressure wave

Wave travels down pipe and bounces off pig
Pressure response
Pressure response 2hrs into recovery operation
In summary
Summary

- Pressure wave analysis methodology validated with field proven results
- Acute level of accuracy
- Removes risk of inserting tools into pipeline
- Cost effective, low risk option for tracking moving objects
THANK YOU
